

Is your garage door left out in the cold?

With today's concerns about rising energy costs, every household is looking at ways to stay warm while saving money. **EXPOL** is proud to release its Garage Door Insulation product to New Zealand. An innovative, DIY product that will improve the insulation value of your garage.

Once installed, you will benefit from a warmer, dryer and quieter garage space while improving the appearance of your garage door. This product is so easy to install and you will be amazed at the results.

GARAGE DOOR insulation

DIY kit

Panel and liner size: 1200mm x 600mm

GARAGE DOOR insulation

DIY kit

Easy to clean surfaces

Garage Door Insulation

- Warm in winter / cool in summer
- Creates a warmer, more usable garage space over winter
- Reduces noise
- Enhances the appearance of your garage door
- Easy to clean surfaces
- Adds value to your home

It's as easy as 1,2,3

1. CUT

2. FIT

3. FINISH

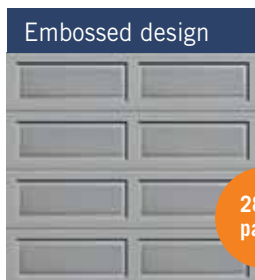

How to measure your garage door

OPTION 1 : 28mm panel

Embossed panel design doors have a smaller depth for the product to sit, you will need to allow for it. This can be done by placing a ruler vertically against the protruding design and measure as shown in the photo (right); it should suit the 28mm product.

Embossed design

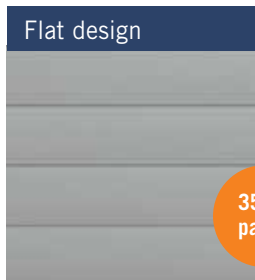

28mm
panel

OPTION 2 : 35mm panel

Flat panel design doors generally have a deeper depth, measure this from the back of the panel to the front of the profile. This should suit the 35mm product.

Flat design

35mm
panel

Kit Includes:

- 8 x Insulation Panels
- 8 x Plastic Door Liners
- 1 x Tube of Glue
- Instruction Sheet

Buying Tips:

- Specifically for Sectional Garage Doors
- Kit insulates 1 Single Garage Door / 5.76m²
- Double doors require 2 kits
- Panel and liner size 1200mm x 600mm
